DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-16, and 22-47 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1, 22, 37, and 46 contain the phrase “for analyzing the characteristics of a fiber-optic device under test (DUT) over a frequency range of interest and particularly with respect to the transfer of optical energy from an input of said device to an output of said device” is a broad range “analyzing the characteristics” followed by a narrow range “particularly with respect to the transfer of optical energy from an input of said device”. A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired.

Applicant is advised that should claim 32 be found allowable, claim 33 will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after

allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Allowable Subject Matter

Claims 17-21 are allowed in view of the prior art of record. The specific limitations to a “spinner” as claimed in claim 17, as a whole, cannot be found in the prior art of record. Specifically the output of the spinner “where a combined light output has a polarization state which varies linearly with frequency variation of said light from said source”.

Claims 1-16, 22-32, and 34-47 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action. The prior art of record fails to teach, as a whole, an optical vector analyzer including a source, the presence of the spinner between the source and the DUT, a Mach-Zehnder interferometer which includes the reference path and the DUT, and the microprocessor as found in all the independent claims.
